PROFESSIONAL SUMMARY

Full Stack Java Developer with 2 years of experience building enterprise applications in BFSI domain using **Java, Spring Boot, Angular, AWS, MySQL, GenAI/RAG**. Experienced in developing **microservices, REST APIs**, end-to-end workflows and transaction processing systems supporting 50K+ daily transactions. Skilled in performance optimization, Kafka-based event-driven architectures, database tuning and Agile software delivery.

SKILLS

Backend: Java, Spring Boot, Spring MVC, Spring Security, Spring Cloud, Hibernate/JPA, Apache Maven, REST APIs, Microservices Architecture, Kafka, JUnit, Mockito, Swagger, Multithreading, Data Structures and Algorithms, Design Patterns
Frontend: Angular, TypeScript, JavaScript, React.js, HTML, CSS, Node.js, Express.js
Databases: MySQL, ORACLE, MongoDB
Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins, CI/CD Pipelines, Git/GitHub
AI: OpenAI API, RAG, AI Agents, Python
Soft Skills: Problem Solving, Communication, Cross-functional Team Collaboration, Agile/Scrum

EXPERIENCE

Java Full Stack Developer - Java, Angular/React.js and AWS (System Engineer)

Tata Consultancy Services Ltd. Jun 2024 — Present, Mumbai

- Developed Angular 19 user interfaces using components, dependency injection, modules, reactive forms, routing and HttpClient for account dashboards, loan origination, status tracking and forms. Migrated Angular Material and ngx-charts libraries from Angular 9 to 19, refactoring APIs and aligning rendering with Ivy compiler changes, reducing UI defects from 50 to 25 per sprint cycle.
- Built Spring Boot microservices for account management and transaction processing; designed RESTful APIs with DTO validation, centralized exception handling and Spring Security-based authentication; supported ~50K daily transactions and reduced API latency from 480ms to 360ms through service-layer refactoring, optimized JPA queries, pagination and API contract standardization. Documented APIs using Swagger/OpenAPI specifications. Containerized Spring Boot microservices using Docker and deployed services on Kubernetes for local orchestration and testing.
- Developed and enhanced loan-origination modules covering application intake, KYC verification, credit scoring and sanction workflows; integrated synchronous REST endpoints with Kafka-based asynchronous event processing for posting and reconciliation; automated status transitions to cut manual handoffs across loan pipelines, reducing ~4 manual interventions and ensuring scalability, reliability and secure transaction processing.
- Optimized Oracle and MySQL database performance using Spring Data JPA, query-plan analysis, composite indexing and stored-procedure refactoring. Eliminated inefficient data-access patterns and reduced critical query execution time by 41% (2.2ms to 1.3ms). Leveraged Grafana and Prometheus for monitoring application and database performance metrics to support reliable transaction processing.
- Contributed to CI/CD release activities, production deployments and L2 support. Collaborated with QA, business and DevOps teams to maintain 99.9% application availability and ensure stable production releases.
- Collaborated with a cross-functional team to develop an AI agent that slashed L1 support ticket volume to zero. Assisted in building RAG-based pipeline and integrated context-propagated tool calling to securely automate user-specific tasks, raising change requests from the chat window.

Software Development Intern

Persistent Systems Ltd Jun 2023 — Dec 2023, Mumbai

- Contributed to full SDLC across backend and frontend tracks, developing Java Spring Boot service modules and Angular components in a production codebase; actively participated in code reviews, sprint planning and Agile methods, gaining hands-on enterprise development experience. Developed REST endpoints and integrated frontend modules with backend services, improving feature delivery timelines and reducing manual testing effort.
- Revamped Angular UI for Home, Product Listing and Checkout pages by refactoring components, improving reactive forms and optimizing HttpClient data flows; post-release metrics showed ~25% increase in customer engagement, +1.5 min average session duration and ~12% growth in orders.

PROJECT

E-commerce platform with integrated AI and Social Media

- Designed and developed a full-stack e-commerce platform using Angular, Spring Boot and MongoDB. Built independent microservices for product management, authentication, order processing and payments, secured with JWT-based authentication and role-based access control (RBAC).
- Implemented Spring Cloud API Gateway-based routing, Kafka-driven asynchronous communication and service-to-service REST integration. Containerized services using Docker and managed product, profile and social-content data using MongoDB.
- Built an AI-powered recommendation engine using OpenAI embeddings, LangChain and Retrieval-Augmented Generation (RAG) techniques for semantic product discovery. Developed personalized spend-analysis insights using OpenAI APIs and prompt-engineering strategies.

CERTIFICATIONS

Claude Certified Architect Professional (CCAR-P), AWS Certified Developer Associate (DVA-C02), AWS Solutions Architect Associate (SAA-C03)

EDUCATION

Bachelor of Engineering (Computer Science and Engineering)

Jul 2020 — May 2024, Mumbai

University of Mumbai | 9.4 CGPA | 1st in inter-college hackathon & reached Smart India Hackathon National Finals.
